

ABSTRACT

A storage cabinet (30, 216) has a number of drawers (38) with shelves (52) having cutout walls (78, 80) providing side support for stored modules (46). An alternative shelving unit (84) includes a spring member (96) with leaf springs (98) that press stored modules (46) against a lip (90) on the unit. The drawers (38) have a roller apparatus (190, 192) on a topmost surface which hangingly roll within curved holders (212, 214).
